Online Services

**OUConsumption Online**
24/7 access to usage information

With **OUConsumption Online**, businesses can check a variety of load data. Using any Web browser, customers can analyze metered interval load data for multiple locations, compare energy usage among similar facilities and measure the effectiveness of various energy efficiency efforts. This detailed information can help a company identify wasteful energy usage and implement money-saving conservation measures.

**OUConvenient Billing**
Paperless billing and account management

**OUConvenient Billing** offers an easy way for OUC customers to manage their utility account. Customers can view a detailed account history and current bills over a secure Internet system, providing a paperless, worry-free account management tool. **OUConvenient Billing** also links to online payment options such as SpeedPay (payment by credit card) or e-Check (payment by electronic check).

About OUC—The **Reliable One**

Established in 1923 by a special act of the Florida Legislature, OUC—The **Reliable One** is the nation’s 16th-largest municipal power company and the second largest municipal utility in Florida. OUC provides electric and water services to more than 313,000 metered accounts in Orlando, St. Cloud and parts of unincorporated Orange and Osceola counties.

OUC has remained the most reliable electric utility in the state over the past 15 years,* and our customers benefit by having among the lowest electric and water rates in the State.

* Based on data provided to the Florida Public Service Commission

OUC Cooling
District cooling A/C solution

With OUCooling — OUC's district cooling service — building owners enjoy lower A/C-related electric charges as well as reduced capital and maintenance costs. Buildings on an OUCooling “loop” are air-conditioned by a chilled water system — an innovative, reliable service that lets commercial property owners outsource all large-scale A/C production.

With OUCooling, all cooling equipment — the cooling tower, pump and chiller — is housed in one centralized, offsite location. At this facility, water is cooled to 37 degrees and pumped through underground pipe loops to participating buildings. Warm air is circulated over chilled water coils at each building, providing a steady, reliable flow of cool air. The water is then recycled to the central chiller facility to be cooled again before returning to the loop.

OUConvenient Lighting
Comprehensive outdoor lighting services

With dozens of fixture, pole and service options, OUConvenient Lighting provides completely customizable outdoor lighting packages for a wide spectrum of commercial applications — from industrial parks to sports complexes to residential developments. Because OUC handles all up-front costs, developers can use the capital they would have spent on fixtures and related equipment for other money making ventures.

OUConvenient Lighting experts work to ensure that the hardware, installation and service are a perfect fit for each customer's unique needs. In addition to preventive and corrective maintenance on new installations, OUC can also retrofit existing fixtures to more efficient, higher-output units.

OUConvenient Lighting is now available to customers in select areas outside OUC’s service territory.

Commercial Indoor Lighting Program
Improved interior lighting with no up-front costs

To complement the OUConvenient Lighting service, OUC offers commercial customers an opportunity to save energy and money by retrofitting existing indoor lighting fixtures with higher efficiency lights at no up-front cost. The retrofit is paid for over time with the monthly estimated energy cost savings realized by the new fixtures.

OUC Backup Generation
Additional security against power loss

OUC offers Backup Generation Service to commercial customers as extra protection against unpredictable events — including hurricanes, thunderstorms and other unexpected disasters. On-site generators are selected to best meet the customer’s needs. OUC handles power evaluation, permitting, installation and ongoing maintenance — all at no up-front cost.

Equipment payments for the OUC Backup Generation Service are spaced over a 5-year schedule, and a monthly maintenance and monitoring fee is included. In addition, current OUC utility customers can have the service added to their monthly utility bill.

Preferred Contractor Network
An easy way to find the right contractor for the job

OUC customers in need of HVAC, plumbing or electrical assistance now have an online resource for finding the right repair and service professional. The OUC Preferred Contractor Network features easy and quick contractor search forms and contact data for listed contractors categorized by specialty. These contractors have agreed to OUC’s standards of conduct and code of ethics, and the service provides opportunities for customer rating and feedback.
