

THE PROCESS

Before work begins:

1. Prepare and submit a Project Application. You can download the application at: WWW.OUC.COM/SAVEYOURWAY
2. Schedule on-site inspection(s) and meeting(s) with OUC to review proposed project.
3. Work with OUC through the incentive funding commitment and approval process.
4. Receive OUC project approval and incentive funding commitment.
5. Perform any required pre-installation Measurement and Verification (M&V).

After work is complete:

1. Submit Installation Report.
2. Perform post-installation M&V.
3. Document the kW and kWh savings.
4. Schedule on-site inspection(s) with OUC to confirm installation and M&V results.

Obtain final approval from OUC and receive rebate in the form of a billing credit on OUC monthly statement.

At OUC, we are committed to weaving sustainability through everything we do while providing clean, reliable and affordable energy and water to our customers.

It pays to save your way

ELIGIBILITY

This program is available to:

- Any commercial customer on the OUC system
- Existing facilities with retrofit opportunities
- New facilities constructed to exceed minimum code requirements

INCENTIVES

Customers receive incentives based on the reduction in peak demand that their project achieves, plus first-year energy savings. Energy and demand saving incentives are paid for the maximum one-hour average demand reduction that occurs during Summer Demand period defined as weekdays, between 1 p.m.– 6 p.m., from April through October. Pre and post inspections are required.

- \$550 per kW reduction incentive and/or first year energy reduction measures at \$0.032 per kWh will also be incentivized.
- \$250 per kW reduction incentive for all lighting measures.
- Incentives shall not exceed 50% of project cost.
- Incentives may be paid 50% at project completion and the remainder at one year, depending on performance results.
- All incentives will be paid as a credit on the customer's OUC statement.
- Simple return on investment must be greater than 2 years.
- Energy and demand conservation measure should have a useful life of at least 10 years.
- A maximum incentive of \$100,000 per customer annually.

WAREHOUSE LIGHTING RETROFIT EXAMPLE

Lighting System	Peak Demand (kW)	Annual Energy Consumption (kWh)
Original	90	402,480
New	60	268,320
Savings*	30	134,160

Initial Project Cost	\$42,000
OUC Custom Commercial/Industrial Incentive (30 x \$250/kW rebate)	<u>\$7,500</u>
Net Project Cost	\$34,500
ANNUAL ENERGY SAVINGS**	\$11,576 <i>Total</i>

PAYBACK PERIOD

\$34,500 / \$11,576 = 3 Years or 36 months
(project cost) (energy savings)

* Demand savings incentives are paid for the maximum one-hour average demand reduction that occurs when the newly installed system is operating at peak conditions during the summer period.

** $(\$8 \text{ monthly demand charge} \times 12 \text{ months} \times 30 \text{ kW}) + (6.482c \times 134,160 \text{ kWh})$

*** Operating hours of 4472

For full eligibility requirements and incentives, please visit www.ouc.com/saveyourway.

ENERGY SAVING MEASURES

Part of the project requirements to qualify for the program is choosing an energy efficient measure. The following is a table of approved measures.

End use	Potential demand reduction measures
Cooling	Packaged cooling unit replacement
	Chiller replacement
	Air-side and water-side economizers
	Fan and pump motor efficiency upgrades
	Thermal storage cooling systems (conditions apply)
Lighting	High efficiency fluorescent lighting (T-8s, T-5s)
	Induction fluorescent
	LEDs
Industrial Process	Any industrial process improvement that reduces the demand for electric power
	All motor-efficiency upgrade projects
