Certain information provided in this document is being provided to meet OUC's current continuing disclosure obligations under various continuing disclosure agreements entered into in connection with certain of its outstanding debt obligations, as required under Securities Exchange Commission Rule 15c2-12.

This page intentionally left blank.

General Information

OUC—the Reliable One is the second largest municipal utility in Florida, providing a portfolio of utility services to more than 268,100 customers in Orlando, St. Cloud and parts of unincorporated Orange and Osceola counties.

OUC was created in 1923 by a Special Act of the Florida Legislature as a statutory utility commission and is governed by a Board (the Board) consisting of four appointed members and the Mayor of the City of Orlando (the City) as a fifth ex-officio member. The Act confers upon OUC the rights and powers to set prices for electric and water services. OUC is responsible for the operation and maintenance of a portfolio of energy services including the acquisition, generation, transmission and distribution of electric and water services, as well as chilled water, lighting, back-up generation, electric vehicle charging and solar energy services and solutions in a manner which is sustainable and delivers value to its customers and the community.

The electric system provides power to customers within the City and certain contiguous portions of Orange County. Beginning in 1997, through the execution of an interlocal agreement, the electric system was expanded to provide power to the City of St. Cloud, their customers and certain portions of Osceola County. The combined electric system is the largest component of OUC's operations and consists of seven generation units, a transmission station with 37 substations and approximately 392 miles of transmission lines and cables. The combined system encompasses 419 square miles and has 262,155 active metered services. The service territory boundaries within the City and certain contiguous portions of Orange County are established by OUC's charter as modified by a territorial agreement with Duke Energy which expired in August 2017. OUC retains the authority to provide utility services in the locations agreed in the expired agreement and will jointly file a newly negotiated agreement with the Florida Public Service Commission when the agreement is finalized. The St. Cloud Agreement expires on September 30, 2042.

OUC provides water service to customers throughout Orlando as well as a 200-square-mile service area as set forth in the territorial agreement with Orange County (the County). OUC's agreement with the County has an expiration date of May 4, 2029 with automatic ten year extension periods. In accordance with OUC's Consumptive Use Permit (CUP) from the St. Johns River Water Management District, water is obtained from deep wells that tap the lower Floridan Aquifer, a natural source of high quality water hundreds of feet below the surface. State-of-the-art water plants ozonate the water for disinfection and remove hydrogen sulfide. In October 2020, in advance of the CUP reduction trigger date of October 1, 2023, OUC submitted a request to renew the CUP at a withdrawal rate of 109.2 mgd for a second 20-year period. While alternative water supply options continue to be pursued including the evaluation of the water supply resources from the lower-lower aquifer, the completion of these options are still in process. OUC's renewal application includes are a variety of additional conservation measures to demonstrate OUC's commitment to water conservation including water price increases focused on increasing tier pricing for high usage customers in April 2021.

OUC operates two related non-regulated businesses – OUCooling and OUConvenient Lighting – that serve the City and surrounding counties. OUCooling provides chilled water services for air conditioning systems through a network of nine chilled water plants in five districts with a total capacity of 50,915 tons. OUConvenient Lighting works with municipalities and commercial partners to plan, install and maintain indoor and outdoor lighting.

Expanded energy services are also provided for back-up generation, electric vehicle charging and renewable energy solutions.

The information presented in the following pages represents OUC's financial and operational information for the periods of 2017-2021 and, where appropriate, amounts have been reclassified to conform to the 2021 presentation. Generally, narratives have been provided for changes greater than 20.0 percent when comparing 2021 to 2020 and 2017.

This page intentionally left blank.

Coronavirus Pandemic

Beginning in March 2020, OUC took swift actions to safeguard its employees and customers in alignment with its strategic value to "Keep Safety First". Beyond implementing safety protocols consistent with Center for Disease Control guidance, enhanced cleaning practices and expanded employee remote connectivity, a \$12.1 million comprehensive Customer Relief Program was implemented with bill payment assistance, waiver of late and disconnection fees for non-payment and expanded bill payment plans and arrangements. While the Customer Relief Program financial assistance was exhausted and the waiver of late and disconnection fees for non-payment were sunsetted in July 2020, payment plans and arrangements continued providing customers with additional flexibility and allowing the reserve for uncollectible charges to decline.

Employee safety protocols have continued to evolve in 2021 with the access to vaccines and increased education, allowing OUC to begin a phased-in hybrid return to work program for employees who transitioned to remote connectivity in 2020. The hybrid program continues to evolve as the Central Florida community moves toward a more steady state.

Eligible emergency response costs associated with employee safety and system security continue to be monitored and tracked for anticipated FEMA cost reimbursement.

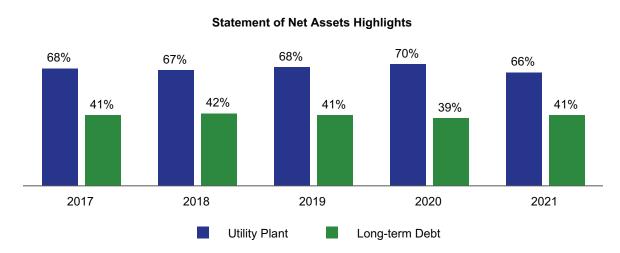

Electric and Water Operations

After experiencing a 2.0 percent decline in retail electric consumption in 2020, the gradual return to business as usual has resulted in a 1.4 percent increase in retail electric consumption in 2021. This increase was driven primarily by consumption in the commercial customer segment as the accessibility of the vaccine and an increased understanding of the COVID-19 virus allowed for commercial operations to resume including the reopening of the theme parks and other tourist attractions. In respect to retail water consumption, in 2020 consumption declined 4.4 percent with relatively no change in consumption in 2021. This differing pattern is primarily due to both the continued low commercial building occupancy rates as well as the supply chain challenges experienced at the close of the fiscal year prompting OUC and the City to call upon its citizens to conserve water to avoid boil water alerts as a result of a liquid oxygen supply constraint which is a critical operating supply for ozone generated water.

Combined Business Operations

Utility Plant and Long-term Debt: As an infrastructure intensive industry, Utility Plant, net continues to represent the majority of OUC's assets. Oversight for the acquisition of these assets is approved by the Board in conjunction with their annual approval of the Five-Year Capital Plan as well as monthly affirmative Board agenda actions. Financing for a portion of Utility Plant is secured through the issuance of long-term debt which is brought forward for Board approval through the Finance Committee in accordance with the Finance Charter guidelines. In 2021, utility plant decreased in conjunction with systematic depreciation charges and the retirement of the McIntosh Unit 3 coal-fired generation facility. Conversely, long-term debt increased with the issuance of the Series 2021A and 2021B Bonds for planned capital spending in alignment with the Clean Power Plan.

Income Before Contributions and Annual Change in Net Position: Total operating revenues have grown on average 1.8 percent over the past five years as a result of customer growth and price changes offset by changing industry dynamics and energy efficiency and water conservation initiatives. Beyond these changes, OUC has continued expanding ancillary revenue opportunities including partnering with its two largest customers to provide on-site chilled water and back-up generation services as well as piloting commercial electrification programs. Over the five years, income before contributions has provided a return on equity within the approved target range of 8.5 percent and 10.5 percent.

¹ In September 2021, OUC purchased the Osceola Generating Station to support the Clean Energy Plan initiatives.

² As a result of the COVID-19 pandemic, the completion of self-constructed assets were delayed and, as such, construction work in progress continued to be higher than the most recent 5-year

³ In 2021, restricted and internally designated assets increased due to the receipt of the Series 2021A and 2021B Bond proceeds and the planned spend down of these funds over a three year period to support the funding of a portion of the 5-Year Capital Plan.

⁴ In 2021, customer receivables, net increased as a result of an increase in customer consumption and a decrease in the provision for uncollectible accounts as a result of a strengthening economy.

⁵ In 2021, miscellaneous receivables, net decreased due to the timing of the receipt of collateral deposits in conjunction with the refunded Series 2017A Bonds and the settlement of the underlying interest rate swap in 2020.

⁶ Fuel inventory has decreased from the prior year as a result of extended pandemic related supply constraints.

⁷ In 2021, prepaid and other expenses decreased due to lower fuel and interest rate margin collateral deposit requirements.

⁸ In 2021, there was an increase in the value of unrealized fuel hedge derivatives as a result of rising fuel commodity prices which has reduced accumulated losses and increased both short-term and long-term hedging derivative instruments.

⁹ In 2021, the decrease in regulatory assets is due to the planned recognition of past service costs for long-term employee benefits offset by the reclassified net book value of the McIntosh Unit 3 (MC3) facility and related inventory due to its retirement in April 2021.

¹⁰ In 2021, other long-term assets increased due to the actuarial valuation of an OPEB asset in the amount \$28.1 million compared to the prior year valuation of a \$1.6 million liability.

¹¹ GASB Statement No. 87, "Leases" was implemented in 2021 where a right of use asset was established for lease contracts previously considered operational leases and a lease receivable was recorded for assets leased to third parties. The implementation included a restatement of 2020 for comparative purposes.

¹² The forward interest rate swap secured in conjunction with the pending issuance of the Series 2021A Bonds with a fair value of \$12.6 million was terminated and settled with the issuance of the bonds in March 2021.

¹³ In 2021, revised estimates for the retirement obligation of the St. Lucie nuclear generation facility were provided from the owner-operator resulting in a decreased liability and a corresponding offset to the fair value retirement obligation asset.

¹⁴ In 2021, deferred outflows of resources for the benefit plans decreased as a result of actuarial assumption changes from the recently completed experience study.

¹ In 2021, rising fuel commodity prices resulted in an increase in fuel payables and margin advances received from fuel hedge derivative counter-parties.

² In 2021, the pension liability decreased while the unrealized pension benefit gains increased as a result of favorable market results and the continued commitment to funding the pension obligation. In respect to the post retirement liability, this amount decreased such that in 2021, the actuarial valuation recognized a postretirement asset as a result of favorable market valuations and commitment to funding. Assumption changes were also a primary driver for the increase in the unrealized postretirement benefits gains.

³ GASB Statement No. 87, "Leases" was implemented in 2021 where a lease liability was established for lease contracts previously considered operational leases and deferred lease revenue was recorded for assets leased to third parties. The implementation included a restatement of 2020 for comparative purposes.

⁴ In 2021, there was an increase in unrealized fuel hedge derivative gains resulting from rising fuel commodity prices.

¹ Electric operating revenues increased due to a rebound from the effects of the pandemic coupled with rising fuel costs which were supplemented with the use of fuel reserves.

² In 2017, a four-year water price plan was approved and effective April 1, 2021, the fourth scheduled price change was implemented increasing the average residential and commercial customer water bill 6.2 percent. The prior three price changes were effective October 2019, January 2019 and April 2018 and increased the average residential and commercial customer water bill 6.2 percent, 3.4 percent and 4.0 percent, respectively.

³ Chilled water revenues increased as a result of COVID-19 and the shut-down of commercial operations in the prior year.

⁴ Fuel for generation and purchased power increased from 2020 as a result of an increase in consumption and rising fuel commodity costs.

⁵ Since March 2020, OUC has incurred additional costs to protect its employees in the amount of \$7.7 million, of which the majority of the costs are anticipated to be reimbursed through the FEMA process in alignment with the eligibility period through March 2022. In 2020, OUC also recognized previously deferred Hurricane Dorian costs that were deemed ineligible for FEMA reimbursement.

⁶ Beginning in 2018, the annual dividend and revenue-based payments to the City of Orlando were fixed at a 3% annual escalation rate. Prior to 2018, the payment to the City of Orlando was fixed based on the approved Operating Budget. In 2021 and 2022, the payment is fixed to reflect modified growth targets and the projected impacts of the pandemic. Beginning in 2023, the payment will continue to be based on the underlying bi-lateral agreement.

⁷ In 2021, the amortization of gains on sale of assets was deferred in alignment with the Clean Energy Plan.

⁸ Interest expense decreased as a result of the overall market impact on variable rate debt.

⁹ In April 2021, the McIntosh 3 generation facility was retired and a Board approved regulatory action was approved to recognize the asset retirement expenses through 2024, the original asset life.

¹ Net cash provided by operating activities increased \$59.3 million due to the collection of retail customer receivables in the amount of \$28.6 million in conjunction with the extended payment terms provided in response to COVID-19 and the receipt of \$15.2 million of emergency response cost reimbursement grant receivables. In addition, unit department expenses were \$10.9 million lower as a result of one-time prior year expanded generation outage costs due to the outage occurring at the onset of the pandemic.

² Net cash used in non-capital related financing activities decreased \$7.7 million due to the delayed receipt of the Build America Bonds interest subsidy payments and the decrease in dividend payments to the City of Orlando.

³ Net cash used in capital related financing activities decreased \$320.6 million primarily due to the issuance of the Series 2021A and 2021B Bonds in the amount of \$326.8 million which offset cash used in capital outlay and debt service payments including the purchase of the Osceola Generating Station in the amount of \$60.5 million.

⁴ Net cash provided by investing activities decreased \$204.9 million primarily due to the Series 2021A and 2021B bond issuance and investment of these proceeds pending their utilization for capital

¹ In 2021, increased fuel payables along with margin advances received from fuel hedge derivative counter-parties combined with a decrease in fuel reserves was the driver for the decreased current ratio. In 2020, the decrease was driven by the use of capital reserves pending the 2021 bond issuance and an increase in scheduled current year bond maturities.

² In 2017, additional reserves for allowance for uncollectible accounts were recorded in conjunction with the CC&B implementation and was the driver for the increased percentages. In 2020, additional reserves in response to the anticipated COVID-19 economic impacts were recognized and in 2021 reserves were reduced to reflect the steady progress of collections including the leveraging of funds designated from the Customer Relief Program and other COVID-19 federal relief programs.

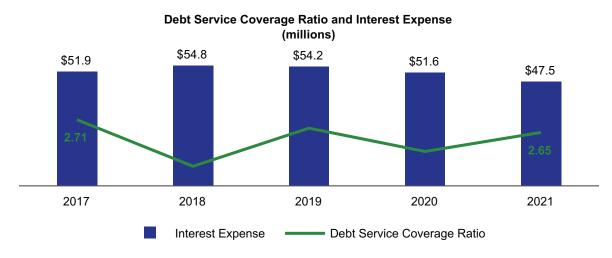

³ In 2021, material inventories increased due to supply chain constraints coupled with the increasing demand to meet new service growth requirements.

⁴ The continued growth in the multi-family home sector is a key driver in this ratio coupled with cost optimization and meter technology advancements initiatives.

Debt Service Information

Long-term Debt & Interest as a Percentage of Debt: Total interest expense as a percentage of debt has declined steadily from 3.2 percent to 2.5 percent over the past five years reflecting OUC's efforts to capture market opportunities while also ensuring rate stability for its customers.

Debt Service Coverage Ratio and Annual Interest Expense: OUC's annual debt service coverage ratio has decreased marginally from 2.71x to 2.65x over the past five years as OUC invests into the future in support of the Clean Energy Plan approved by the Board in December 2020.

¹ The amounts presented here are the annual funding requirements for the principal and interest for the respective bond issues. The interest is paid semi-annually on April 1 and October 1 of each year. The principal amount, based on the maturity schedule, is fully funded and included as a component on the internally designated assets at September 30 of each fiscal year and paid on October 1, the first day of the following fiscal year.

² OUC issued the Series 2021A and 2021B fixed rate bonds with a combined par amount of \$294.1 million and a premium of \$24.4 million. The proceeds are to fund a portion of the 2021 5-Year Capital Plan in conjunction with the Clean Energy Plan. Additionally, OUC issued the Series 2021C fixed rate bonds with a par value of \$19.7 million and a premium of \$2.6 million and the proceeds were used for the partial refunding of the Series 2011B and 2011C Bonds.

³ Amounts represent the total federal subsidy projected through maturity at the current sequester rebate percentage of 32.69% and are subject to change based on regulations of the Build America Bond (BAB) program.

¹ In October 2020, assumption studies and experience reviews for the seven-year period ended September 30, 2019 were completed and changes were implemented in the actuarial valuation for September 30, 2020 for key actuarial assumptions.

² Net investment income is recognized based on market performance noting that while investment returns vary on an annual basis, the composition of the portfolio is maintained in accordance with the Investment Policy and is reviewed regularly with the board approved Trustees and an independent investment advisor.

³ For the non-qualified plan, there were no assets accumulated in a trust that meet the criteria in GASB Statement No. 73, "Accounting and Financial Reporting for Pensions and Related Assets That Are Not within the Scope of GASB Statement 68, and Amendments to Certain Provisions of GASB Statements 67 and 68," to pay related benefits. As such, assets were reported in OUC's financial statements and were not netted against the total pension liability.

⁴ Actuarially determined contribution amounts were calculated as of October 1 of the year preceding the contribution year. In 2021 and 2020, employer contributions decreased as a result of several variables, including modifications to the health and wellness plan options and premium structures along with reduced utility discount maximums to support energy and water conservation initiatives for the limited number of participants vested in the program which was closed in 1985.

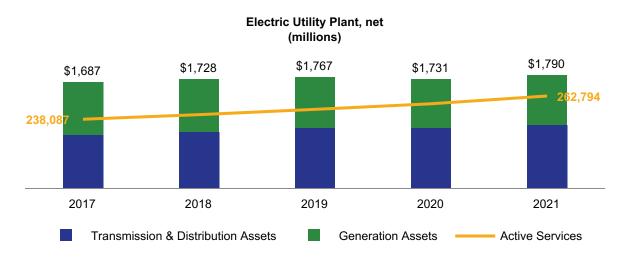

This page intentionally left blank.

Electric Business Operations

Generation and Retail Sales: Energy generation has been consistent with native load and contracted wholesale sales requirements and commitments.

Electric Utility Plant: The expansion of generation resources through the execution of power purchase agreements, including the most recently executed power purchase agreement which incorporates the installation of energy storage, has modified the growth in generation facility assets. Offsetting this growth is the continued expansion of energy delivery utility plant to meet customer resiliency and reliability expectations.

¹ In 2021, electric operating revenues increased due to a rebound from the effects of the pandemic coupled with rising fuel costs that were offset with the increased use of fuel reserves included in retail electric revenues. Electric operating revenues decreased in 2020 due to impacts from COVID-19. The decrease was due to lower consumption from the shut-down of commercial operations coupled with elevated allowance for uncollectible accounts from the impacts on the travel and tourism industry and the associated increased rates of unemployment. These decreases were partially offset by \$11.5 million from customer price changes which were implemented in October 2019 and \$3.9 million associated with continued customer growth and increased residential consumption.

² Fuel and fixed demand payments increased from 2020 as a result of increasing commodity prices from various COVID-19 related supply constraints.

³ Since March 2020, OUC has incurred additional costs to protect its employees in the amount of \$7.7 million of which the majority of the costs are anticipated to be reimbursed through the FEMA process in alignment with the eligibility period through March 2022. In 2020, OUC also recognized previously deferred Hurricane Dorian costs that were deemed ineligible for FEMA reimbursement.

⁴ Depreciation and amortization expenses have increased over the years due to the capitalization of new assets and financial actions to align the depreciable life of generation facility assets with OUC's operational and clean energy initiatives.

⁵ In 2021, the decrease is a result of prior year one-time investment opportunities.

⁶ In 2021, the amortization of gains on sale of assets was deferred in alignment with the Clean Energy Plan.

⁷ Interest expense decreased as a result of the overall market impact on variable rate debt.

⁸ In April 2021, the McIntosh 3 generation facility was retired and a Board approved regulatory action was taken to recognize the asset retirement expenses through 2024 which was the original life of the asset.

¹ In 2021, sales per customer and revenue per kWh began normalizing from the effects of the pandemic.

² Total fuel expense per kWh was on a steady decline, however, in 2021 this trend has started to reverse as natural gas and other fuel commodity costs have begun to rise.

³ In 2021, total operations and maintenance expenses increased due to increased fuel and purchased power related to rising commodity costs as well as the rebounding economy and an increase in health and wellness cost as a result of the pandemic related non-emergency medical services.

¹ New agreements with Mt. Dora, Chattahoochee, Lakeland and additional short-term agreement executed in 2021.

² OUC's combustion turbines located at IRP are intended for limited reserve capacity usage which results in higher fluctuations in activity.

¹In 2021, outage and service interruption times decreased from 2020 levels as there was milder weather, lessened COVID-19 safety protocols and a decrease in mutual aid support to peer utilities. One-time weather events beyond named hurricane events impacted 2018.

² The L-Bar, CAIDI and SAIDI statistics are highly variable due to the small volume of events in this area. The St. Cloud/Osceola system was not significantly impacted by some of the summer storm activity seen in Orlando in 2018. During 2019, St. Cloud/Osceola County experienced an active summer storm season. In 2020, COVID-19 safety protocols negatively affected the length of time of power outages. In 2021, mild weather, strategic initiatives and lessened COVID-19 safety protocols resulted in less circuit lockouts.

³ From 2017 through 2019, distribution expenses increased primarily due to increased staffing levels to support maintenance projects.

¹ In 2021, total plant increased due to major transmission and distribution upgrade projects and the acquisition of the Osceola Generating Station offset by the shuttering of the MC3 generation facility in April 2021.

² Coal consumption fluctuates based on economics and generation facility availability. In 2017 and 2018 coal consumption increased in conjunction with coal generation facility efficiency upgrades. Conversely, planned and unplanned outages offset these increases in 2019 with continuing impacts in 2020 due to favorable natural gas commodity costs. In 2021, coal consumption increased due to generation facility availability and rising natural gas costs.

³ To support achieving our net zero CO₂ emission goals by 2050 with interim 2030 and 2040 goals of 50 percent and 75 percent reductions in emissions, respectively, OUC continues to execute solar energy power purchase agreements. The increase in 2021 is the result of the annualized impact of the two 74.5 megawatt utility scale solar farms energized in June 2020. Beyond energizing these two utility scale solar farms, OUC has committed to two more 74.5 megawatt utility scale solar farms projected to be energized in December 2023. The combined amount of these four 74.5 utility scale solar farms provides for a financial commitment of \$523.0 million and allows for OUC to achieve its strategic goal of securing \$400 million of solar energy by 2030. Beyond the two energized utility scale solar farms, OUC has 9 renewable power purchase agreements comprised of both solar power and landfill gas. In alignment with the expansion of these resources, the cost is also decreasing as technology advances and accessibility increases.

¹ To support achieving our net zero CO₂ emission goals by 2050 with interim 2030 and 2040 goals of 50 percent and 75 percent reductions in emissions, renewable energy MWh have increased in 2021 as a result of the annualized impact of two 74.5 megawatt utility scale solar farms energized in June 2020.

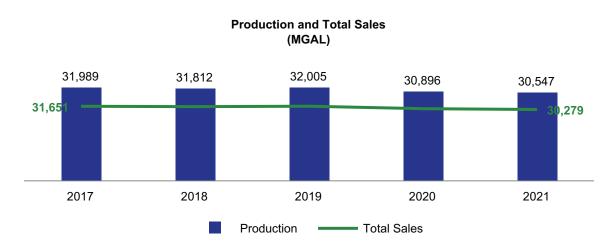

² The Central Florida community is steadily embracing rooftop solar with a 68.4 percentage increase in retail and interlocal solar net-metering customers.

³ Power purchase agreements (PPA's) are based on contracted terms related to individual generation or expected availability of generation under each agreement and nameplate capacity and undivided interest are not applicable.

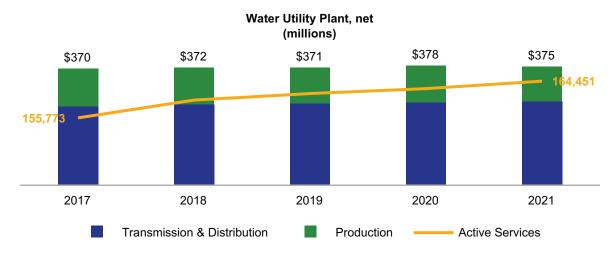

This page intentionally left blank.

Water Business Operations

Production and Total Sales: While active service growth reflects a cumulative increase of 5.6%, production and sales over the same period have decreased 4.5 percent and 4.3 percent, respectively, as a result of the COVID-19 closures and pricing design changes implemented to enhance conservation efforts.

Water Utility Plant: Recent plant additions have focused on transmission and distribution assets to service continued customer growth and maintain customer quality. In 2021, OUC embarked on a large-scale multi-year water capital improvement project designed to upgrade the system's existing underground cast iron pipes to enhance resiliency and ensure the safe and reliable delivery of water resources.

¹ In 2017, a four-year water price plan was approved and effective April 1, 2021, the fourth scheduled price change was implemented increasing the average residential and commercial customer water bill 6.2 percent. The prior three price changes were effective October 2019, January 2019 and April 2018 increasing the average residential and commercial customer water bill 6.2 percent, 3.4 percent and 4.0 percent, respectively. In conjunction with this change, the Board approved the use of reserves to facilitate customer rate stability, and beginning in 2021, planned revenues were deferred to rebuild these reserves in accordance with Finance Charter guidelines.

¹ In 2020, commercial consumption decreased ~9.0 percent due to lower water demand as a result of the mandated shutdowns as well as the overall impacts from COVID-19. In 2021, OUC and the City called upon its citizens to conserve water, as liquid oxygen, a critical input in water purification, was in high demand and became constrained as a result of the pandemic.

¹ Rainfall and warmer than normal weather coupled with service growth are the key drivers for peak day annual variances.

² In 2020 and 2021, the commercial sector experienced a decrease in sales as a result of COVID-19 and its impact on travel and tourism as well as office occupancy rates in the Central Florida area. In 2021, supply chain constraints for a critical water production supply, liquid oxygen, also impacted consumption with a community call to action to conserve water and avoid boil water alerts.

Lighting Business Operations

Utility Plant and Operating Revenues: Conventional Utility Plant represents lighting infrastructure that is provided to municipalities for streetlights and other right of way lighting requirements. Utility plant installed for municipalities increased in 2019 and 2020 as traditional streetlights were replaced with LED streetlight technology to enhance community safety and promote energy efficiency. As a result of this transition, revenues recovered through tariff based pricing have remained relatively consistent reflecting the value financial value provided from the installation of LED technology.

Convenient Utility Plant represents lighting infrastructure that is provided to commercial customers and is billed through contractually determined pricing that is, on average, recovered over a 20 year period. The increase in utility plant for this business segment over the five year period is driven by the expansion of new commercial customers as well as technology upgrades.

Operating revenues for both business segments have grown on average 7.4 percent per year over the five year period primarily from the Convenient Lighting sector.

Chilled Water Business Operations

Production and Operating Revenues: Operating revenues have recently declined due to the decrease in cooling demand from the shut-down of commercial operations and decreased office occupancy rates impacted by COVID-19. In 2019, OUC executed agreements with its largest customers to own and operate chilled water facilities on their sites. The facility at the Orlando International Airport is anticipated to be operational in 2022.

Chilled Water Plant, net: OUC operates five chilled water plants with a total capacity of approximately 51,000 tons and an average contractual life of 20 years. OUC maintains the plants at peak operating performance through the term of each contract and, as each contract is renewed, planned capital upgrades are agreed upon in relation to expansion to support new customers. In 2019, OUC entered into chilled water agreements with its top two customers with targeted completion dates of 2022.

¹ In 2020, operating revenues declined due to the decrease in cooling demand from the shut-down of commercial operations and low commercial occupancy rates impacted by COVID-19, particularly the I-Drive District with a high concentration of visitors. In 2021, operating revenues returned to pre-pandemic levels due to a rebound from the effects of the pandemic.

Statistical Information

Number of Employees: An allocation is performed for all shared service employees that are not assigned to support a single operating area as defined above. In 2020, significant shifts in alignment occurred based on organizational changes related to shared services employees.

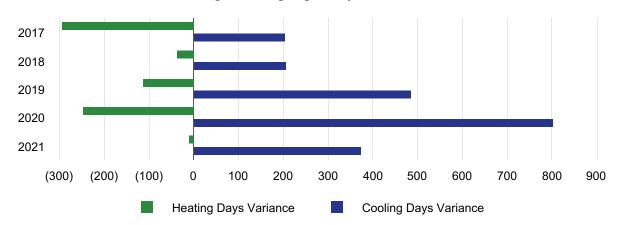

The Electric System Service Territory: The Electric System provides energy to customers within the City of Orlando and certain contiguous portions of Orange County and the City of St. Cloud, which is located in Osceola County, and certain contiguous portions of Osceola County. OUC's service territory and its right to serve Electric System customers are generally established by the Special Acts of 1923, however, electric utilities in the State may negotiate and enter into territorial agreements with other utilities.

The Water System Service Territory: The Water System provides water service to customers throughout a 200-square-mile service area including service provided through a territorial agreement with Orange County that, based on agreement provisions, renewed for a succeeding 10-year period beginning in May 2019. The service area encompasses the cities of Orlando, Edgewood and Belle Isle, plus large portions of the unincorporated area of Orange County.

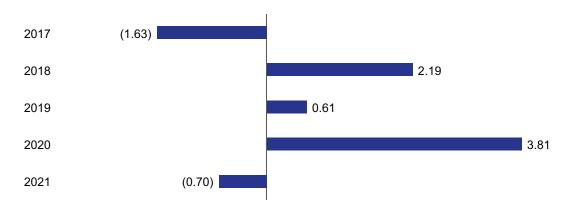

Climatological Data

Orlando Metro Area Fiscal Year Ended September 30

Number of Heating or Cooling Degree Days Below or Above Normal

Yearly Variance in Rainfall (inches)

A multi-regression model is used to determine the relationship between rainfall and water sales based on the dependent variable of daily treated water. In this model, daily rainfall is also capped at ½ inch as excess daily rainfall had no meaningful impact on water sales.

INSURANCE COVERAGES

September 30, 2021

Carrier	Type of coverage	Limits	Periods	
ouc	General liability	\$2.0 million per occurrence retention	Continuous	
ouc	Automobile liability	\$2.0 million per occurrence retention	Continuous	
OUC	Worker's compensation	\$500 thousand per occurrence retention	Continuous	
ouc	Health and medical benefits individual stop-loss	Amounts in excess of \$0.25 million per insured per year net of applicable deductible	Continuous	
AEGIS	Excess automobile and general liability	\$50.0 million above the \$2.0 million retention for the general liability and automobile liability	10-01-2020 / 09-30-2021	
AEGIS	Directors & officers / public officials liability	\$10.0 million	10-01-2020 / 09-30-2021	
Aetna	Health and medical benefits aggregate stop-loss	Amounts in excess of 125% of expected annual claims with a maximum policy payment limit of \$2.0 million	Continuous	
CHUBB	Fiduciary Liability	\$10.0 million	10-01-2020 / 09-30-2021	
Factory Mutual	All risk property/boiler and machinery	\$2.7 billion insurable values \$250 thousand base retentions, various retentions depending on machinery	10-01-2020 / 09-30-2021	
Florida Municipal Insurance Trust (FMIT)	Excess worker's compensation	Statutory limit of liability above a \$500 thousand per occurrence retention	10-01-2020 / 09-30-2021	
Zurich Insurance Group	Dishonesty, disappearance & destruction (crime)	\$10.0 million	10-01-2020 / 09-30-2021	

^{*}All coverages with an expiration date of 09-30-2021 have been renewed through 09-30-2022.

GLOSSARY OF TERMS

Active Services: Services are provided to residential and commercial customers by OUC through service agreements. The service agreement is deemed active only if the service is current and not interrupted by suspension and/or closure.

Average Length of Service Interruption in Minutes (L-Bar): Measures the average length of time of a single service interruption.

Average Service Availability Index (ASAI): The ratio of the total number of hours that service was available to the total customer hours demanded.

Build America Bonds (BABs): Taxable municipal bonds created under the American Recovery and Reinvestment Act of 2009 that carry special federal subsidies for either the bondholder or the bond issuer.

Capacity Factor (CF): A measure of the performance of a power source over time as a percentage of its full power potential.

Cash and Cash Equivalents: The value of assets that can be converted into cash immediately. Usually includes bank accounts and marketable securities, such as government bonds. Cash equivalents on the Statements of Net Position include securities with an original maturity of 90 days or less.

Circuit Mile: The total length in miles of separate circuits regardless of the number of conductors used per circuit.

Combined Cycle (CC): Characteristic of a power producing engine or plant that employs more than one thermodynamic cycle.

Combustion Turbine (CT): Turbine that converts the chemical energy of a liquid fuel into mechanical energy by internal combustion; gaseous products of the fuel, which are burned in compressed air, are expanded through a turbine.

Contribution in Aid of Construction (CIAC): Any amount of money or other property contributed to a regulated public utility to the extent that the purpose of the contribution is to provide for the expansion, improvement, or replacement of the utility's facilities.

Customer Average Interruption Duration Index (CAIDI): The average repair time that any given customer may experience.

Debt Service Coverage: A ratio of cash available for debt service to interest, principal and lease payments, excluding payments to the City of Orlando.

Debt Service Requirement: Amount required to service all debts during a period, usually one year.

Derivative: A security for which price is dependent upon or derived from one or more underlying assets. The derivative itself is merely a contract between two or more parties. Examples of derivatives include futures and options.

Equivalent Availability Factor (EAF): The amount of time a generation plant is able to produce electricity over a certain period, divided by the amount of time in the period.

Equivalent Forced Outage Rate (EFOR): A measure of reliability during the time the generation plant was actually required to generate.

Federal Emergency Management Agency (FEMA): An agency of the United States Department of Homeland Security with a primary purpose of coordinating the response to a disaster that has occurred in the United States that overwhelms the resources of local and state authorities.

Fossil Steam (FS): The steam created from burning fossil fuel such as coal.

General and Administrative Expenses (G&A): The expenses of operating a business that are not directly linked to the company's products or services. They include salaries, rent and payments to utilities generally known as overhead.

Governmental Accounting Standards Board (GASB): The authoritative standard-setting body that establishes accounting and financial reporting principles for governmental entities in the United States.

Hedging: The process of buying and selling fuel oil, natural gas and electric energy futures, options or similar contracts to protect against loss due to price fluctuations.

Interlocal Sales: Agreement between OUC and the City of St. Cloud (STC) to provide retail electric service to all STC customers.

Kilowatt (KW): A measure of electric power. A kilowatt equals 1,000 watts. It produces enough energy to light up ten 100-watt light hulbs

Kilowatt-hour (KWh): A measure of electric power consumption. A kilowatt-hour equals 1,000 watts of energy flowing for a one hour period.

MMBtu: 1,000,000 British Thermal Units (BTU). A BTU is the standard unit for measuring the quantity of heat energy, such as the heat content of fuel. It is the amount of heat energy necessary to raise the temperature of one pound of water one degree Fahrenheit at sea level pressure.

Megawatt (MW): A measure of electric power. A megawatt equals 1,000 kilowatts or 1,000,000 watts.

Megawatt-Hour (MWh): A measure of electric power consumption. A megawatt-hour equals one megawatt of power flowing for one hour.

Metropolitan Statistical Area (MSA): A Core Based Statistical Area having at least one urbanized area with a population of 50,000 or more, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

Millions of Gallons (MGAL): A unit of measurement usually used to measure water in utility plants.

Other Post-Employment Benefits (OPEB): Post-employment benefits other than pension benefits. OPEBs include postemployment healthcare benefits, regardless of the type of plan that provides them, and all post-employment benefits provided separately from a pension plan, excluding benefits defined as termination benefits.

Peak Demand-Gross (Instantaneous): The demand at the instant of greatest load, usually determined from the readings of indicating or graphic meters.

Peak Demand-Net (Net 60-min integrated MW demand): The greatest rate at which electrical energy has been used during any on-peak period of 15 consecutive minutes in the billing month.

Photovoltaic Credit Meters: Solar system owners receive credit on their energy bill for sending electricity into the grid which is outlined in their utility net metering policy.

Refunding: Retiring an outstanding bond issue after the first call date by using money from the sale of a new offering.

System Average Interruption Duration Index (SAIDI): The average outage duration for any given customer.

System Load Factor: The ratio of the average load in kilowatts supplied during a designated period to the peak or maximum load in kilowatts occurring in that period.

Utility Plant In-Service: An asset with a life of two or more years and a value of greater than \$1,000.

RELIABLE PLAZA 100 WEST ANDERSON STREET ORLANDO, FL 32801
